

PRACTICE PROBLEM 9 : FIND x^n

- x^n using a recursive method. ($x \neq 0$, n is an integer)
- Input example: 4 2
- Output example: 16.00

$$f(x, n) = \begin{cases} x * f(x, n - 1); & (n > 0) \\ 1; & (n == 0) \\ f(x, n + 1)/x; & (n < 0) \end{cases}$$
